FULL STACK SOFTWARE DEVELOPER

Full Stack Software Developer with experience building revenue-generating SaaS features, trading platform infrastructure, AI-powered automation tools, and scalable internal systems using React, Node.js, Python, Go, PostgreSQL, and cloud platforms. Delivered production systems used across trading, sales, and marketing operations, including algorithm marketplaces, AI sales tooling, automated CRM workflows, and cloud-hosted enterprise applications. Strong track record of shipping high-impact features end-to-end with measurable operational and commercial outcomes.

TECHNICAL SKILLS

Frontend	React, Nuxt.js, Flutter, JavaScript, TypeScript
Backend	Node.js, Flask, Go, Python
Databases	PostgreSQL, MongoDB, Firebase, MySQL
Cloud & DevOps	Azure, Google Cloud, IIS, REST APIs
Tools & Integrations	Discord API, Twitter API, Zoho API, SharePoint Online

PROFESSIONAL EXPERIENCE

Trade View Pty Ltd — Full Stack Developer | Jan 2024 – Present

- Engineered a full-scale trading algorithm marketplace enabling users to buy, sell, analyze, and deploy trading systems directly within the platform, expanding monetization capabilities and increasing user engagement.
- Developed a proprietary “Matching Block” trading feature enabling automated hedging strategies for long and short positions with export compatibility to MT4 and MTS trading environments.
- Built an AI-powered Sales Agent that processed live trader-client conversations and generated real-time response recommendations, reducing manual sales handling effort.
- Automated cross-platform marketing workflows connecting internal systems and social media publishing pipelines, significantly reducing manual posting operations.
- Designed and implemented a behavioral tracking system integrated with Zoho Cliq that triggered automated sales alerts based on user interaction thresholds.
- Created an automated invoice validation bot integrated with Zoho Invoice and Zoho Cliq to detect duplicate-user and invoice-generation failures in real time.

- Redesigned and implemented a profit-and-loss leaderboard homepage feature showcasing top-performing users and improving platform competitiveness.

Uniting Vic. Tas — Web Developer Intern | Feb 2023 – Jun 2023

- Built and deployed an internal administrative platform using React, Node.js, and MySQL to centralize organizational data management workflows.
- Integrated SharePoint Online with the React application, enabling seamless company-wide access to operational data.
- Provisioned and configured Azure Virtual Machines and Virtual Networks to deploy the application on IIS cloud infrastructure.
- Delivered full-stack functionality across frontend, backend, database, and cloud deployment layers during the internship period.

PERSONAL PROJECTS

E-Commerce Monitor & Discord Automation

Developed a Python-based Shopify and custom website monitoring system that tracked newly released products and pushed real-time Discord notifications for rapid checkout execution.

Twitter Monitoring & OCR Automation Tool

Built a Twitter monitoring platform using Python and Twitter API integrations capable of scraping monitored accounts and extracting text embedded within images using OCR automation.

Automated Raffle & Form Submission Bot

Engineered a Discord-integrated automation bot that processed CSV datasets and automatically submitted Google and Microsoft forms at scale.

EDUCATION

The University of Melbourne

Master of Information Technology | 2022 – 2023

Bachelor of Science — Computing and Software Systems | 2019 – 2021
